

PROTOTYPE PITCH DECK

Aegis Guard

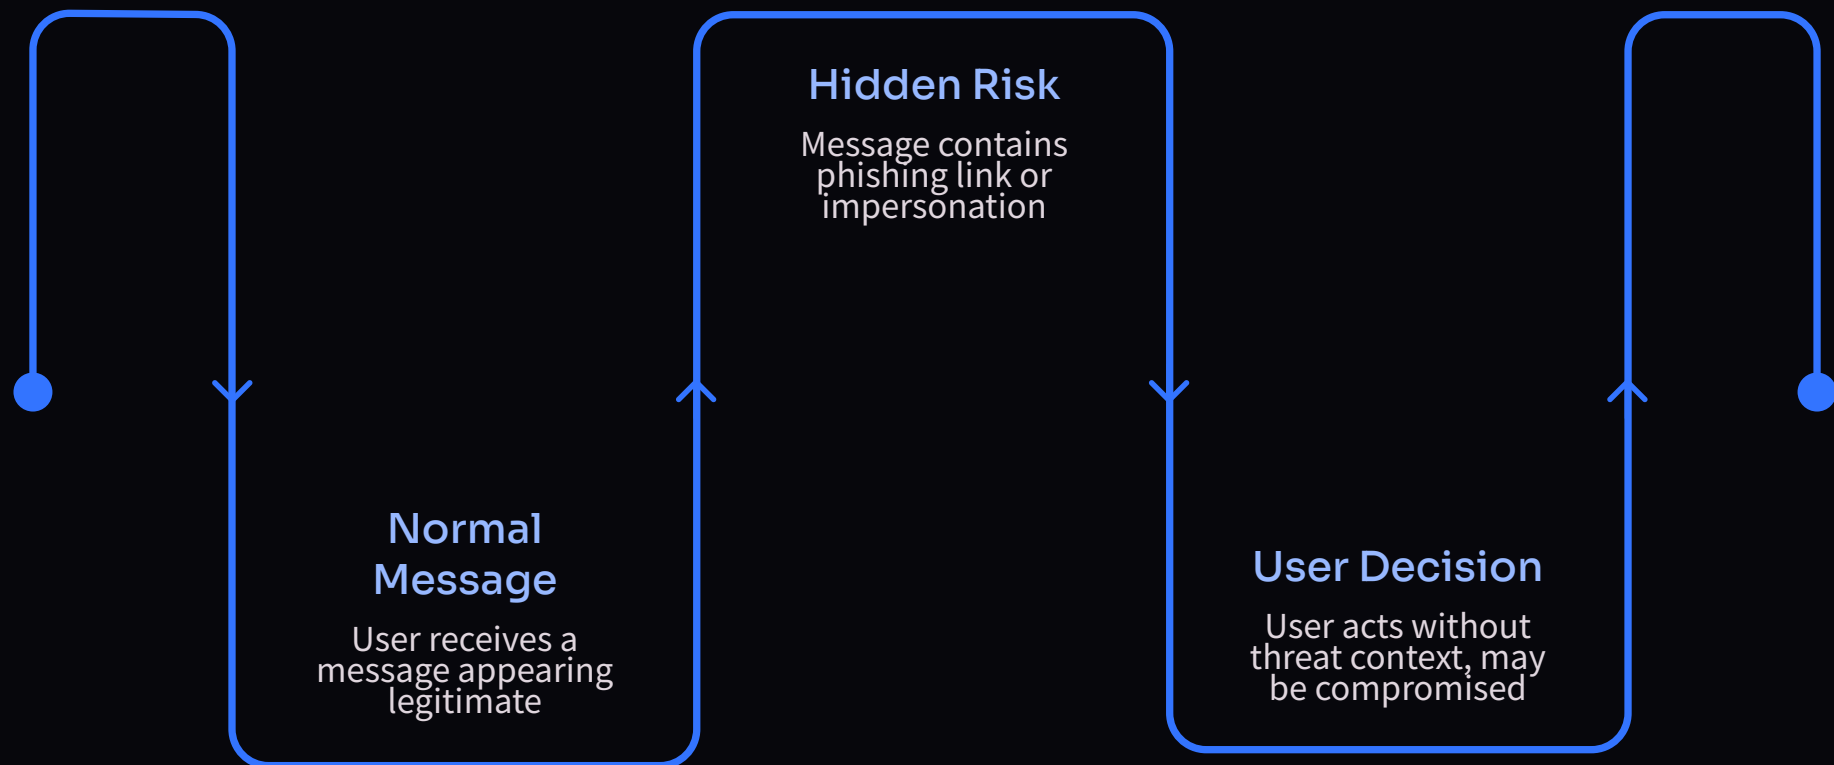

AI-Powered Secure Messaging & Threat Monitoring

Protecting conversations before trust is abused.

THE PROBLEM

Conversations Are Becoming Attack Surfaces

Phishing, impersonation, and social engineering now occur inside trusted messaging channels. Existing platforms focus on communication — not threat awareness.

WhatsApp and Signal encrypt messages but offer no AI risk scoring. Telegram and SMS expose users to scam links. Security tools operate outside chat apps, not within conversations.

THE SOLUTION

Secure Messaging With Built-In AI Threat Awareness

AI Message Analysis

Analyzes suspicious messages and delivers clear, actionable security summaries.

Threat Cards & Reports

Users view concise threat cards or open full security reports for deeper context.

Built-In AI Assistant

Ask the Aegis Guard AI for real-time cybersecurity guidance inside any conversation.

Privacy & Settings

Profile, contacts, saved messages, and security settings — all in one secure app.

Unfinished modules are marked **Coming Soon** to prevent incomplete user flows.

User Guide: From Login to Security Analysis

User opens Aegis Guard.

User logs in or creates an account using email/password or Google login.

If the user forgets the password, they click reset password.

The password reset email may go to Spam because Firebase sends it from a default no-reply sender.

User should open Spam, mark the email as "Not spam", then use the reset link.

After login, user can create chats, add contacts, and use Saved Messages.

When a message looks suspicious, Aegis Guard shows AI security analysis.

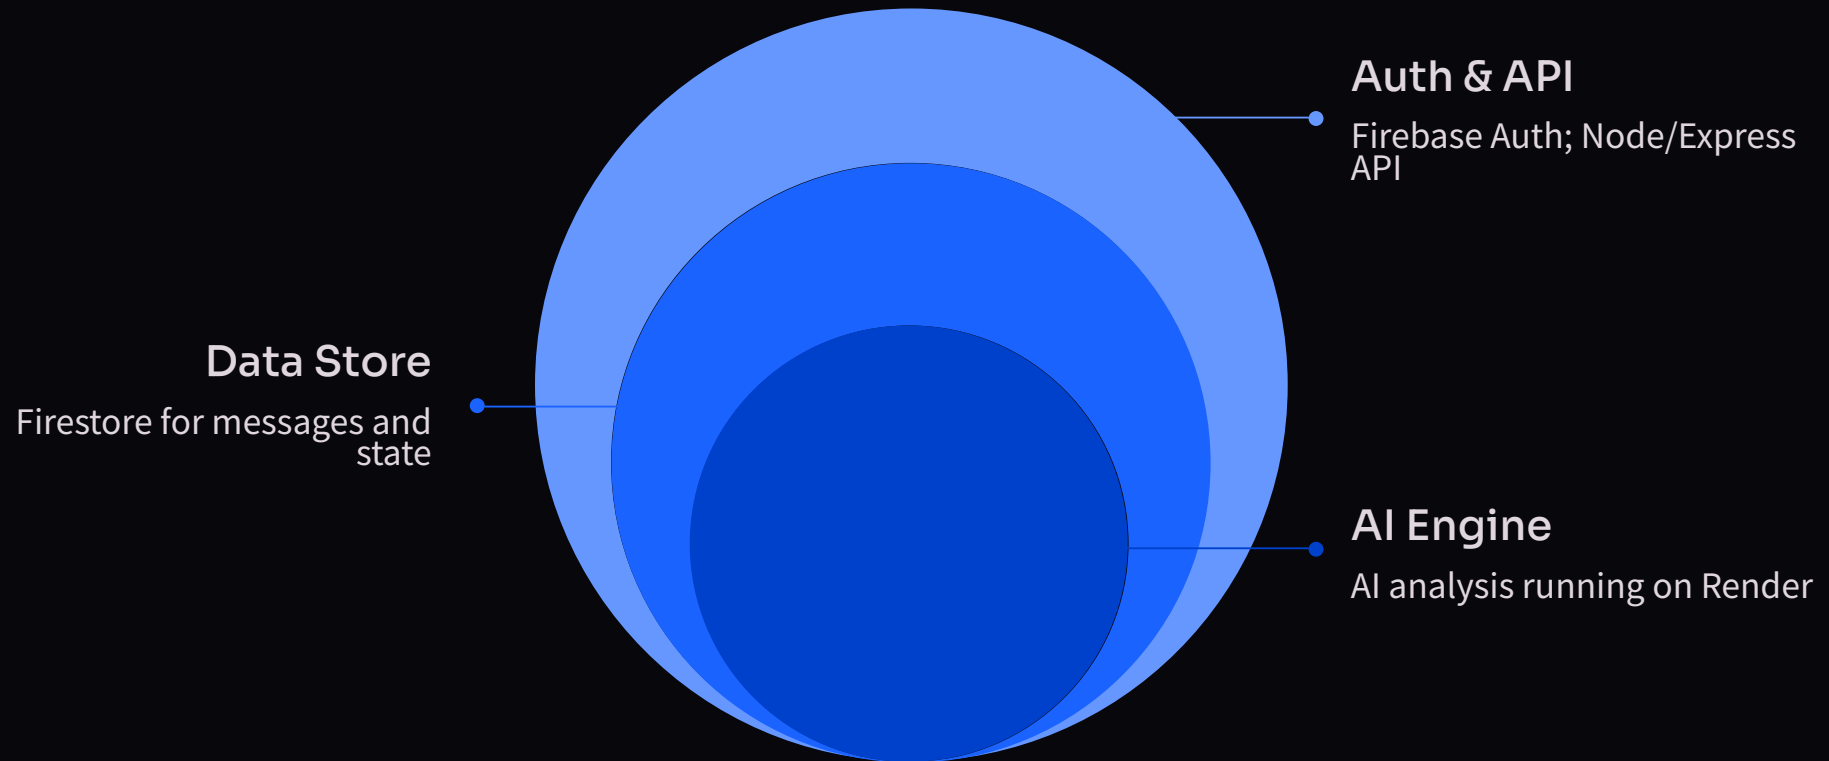

User can read the short threat summary or open the full security report.

User can ask the built-in AI assistant for cybersecurity guidance.

Prototype Implementation

The prototype uses a modern, serverless-ready stack — React and TypeScript on the frontend, Node.js/Express backend, Firebase for auth and data, and Render for deployment. AI analysis runs inline with message processing.

Implemented Features

- Login, profile, contacts, chats, saved messages
- Privacy settings, legal pages, AI security analysis
- Auto-update service, profile photo optimization
- Google verification support

Coming-Soon Locks

Unfinished features are clearly locked to prevent incomplete user flows and maintain a consistent prototype experience.

Where Aegis Guard Stands Apart

Platform	Secure Messaging	AI Threat Summary	Full Security Report	Cybersecurity Assistant
WhatsApp	✓ Yes	✗ No	✗ No	✗ No
Signal	✓ Yes	✗ No	✗ No	✗ No
Telegram	⚠ Partial	✗ No	✗ No	✗ No
Google Messages	✓ Yes	⚠ Limited	✗ No	✗ No
Truecaller / Security Apps	✗ No	⚠ Limited	✗ No	✗ No
Aegis Guard	✓ Yes	✓ Yes	✓ Yes	✓ Yes

Aegis Guard is the only platform combining end-to-end secure chat, inline AI threat summaries, full security reports, and a built-in cybersecurity assistant — all within a single application.

Roadmap & Market Opportunity

Market Opportunity

Phishing and impersonation attacks are rising across all demographics. Students, families, professionals, and small businesses need safer communication tools.

Business Models

- Freemium app with core secure messaging
- Premium AI security reports
- Team and school plans
- Enterprise security add-ons
